Introduction/Actions/Assumptions/Result Summary:

Introduction:

TSA was instructed by Concorde Glass Ltd to provide the below Calculations:

- 1- Provide fixing details for side-fix connections from GLASSLOC JULIETTE to concrete, steel, aluminium, and timber for a span of 2000mm.
- 2- Provide a glass analysis for the GLASSLOC JULIETTE for a span of 2000mm.

Actions:

Balustrade load = 0.74kN Point load = 0.5kN Typical High Wind load = 2.5kN/m² (Table NA.6 IS1991-1-1:2002) (Table NA.5 IS1991-1-1:2002)

Assumption:

Concrete Grade = C30/37

Bolts are grade 8.8 Mild Steel.

Timber Grade = C16 (minimum)

Result Summary:

A. Side Fix Glassloc Juliette:

C1. For Span of 2000mm:

- Connection to Concrete: Use 1No. Ultracut FBS II 8×70 20/5 Zinc Plated Steel Fischer Concrete screws@200mm C/C with Minimum Embedment depth is 40mm and Minimum edge distance is 50mm.
- 2- Connection to Steel: Use M8 Grade 8.8 bolts @200mm C/C.
- 3- Connection to Timber: Use M8×40mm Timco Coach Wood Screws @200mm C/C.
- 4- Connection to Aluminium: Use M5.5 ABR Index Screws or similar @200mm C/C.
- Glassloc Juliette Glass Panel 3: 1100mm (H) × 2000mm (W) × 21.52mm Toughened
 Laminated Glass Panels with EVA Interlayers.

Glass Strength

Balustrade Loading:

< 5mins duration => k_{mod} = 0.77

 $f_{gd} = (k_{mod})(k_{sp})(f_{gk})/\gamma_{ma} + k_v(f_{bk}-f_{gk})/\gamma_{mv}$

 $f_{gd} = (0.77)(1.0)(45)/1.6 + 1.0(120-45)/1.2$

 $f_{gd} = 84.2 \text{N/mm}^2$

Wind Loading:

10min duration, Multiple Gust Storm => k_{mod} = 0.74

 $f_{gd} = (k_{mod})(k_{sp})(f_{gk})/\gamma_{ma} + k_v(f_{bk}-f_{gk})/\gamma_{mv}$

 $f_{gd} = (0.74)(1.0)(45)/1.6 + 1.0(120-45)/1.2$

 $f_{gd} = 83.3 \text{N/mm}^2$

Connection to Concrete Design - Side Fixed – Span of 2000mm:

Shear Load due to Balustrade load = 0.74kN/m $\times 1.5 \times 1$ m = 1.11kN (ULS)

Shear Load due to Wind load = 2.5kN/m² × 1.5 × 1m × 0.6m = 2.25kN (ULS) – Worst Case.

Therefore, use 1No. Ultracut FBS II 8×70 20/5 Zinc Plated Steel Fischer Concrete screws@200mm C/C with Minimum Embedment depth is 40mm and Minimum edge distance is 50mm as per the screenshot below.

Connection To Mild Steel Baseplate - Side Fixed – Span of 2000mm: **M8 Grade 8.8 Bolt:**

$f_y = 640 MPa$	(Grade 8.8 Mild Steel, Table 3.1 EN 1993-1-8:2005)
$f_{ub} = 800 MPa$	(Grade 8.8 Mild Steel, Table 3.1 EN 1993-1-8:2005,
$\alpha = 0.6$	(Table 3.4 EN 1993-1-8:2005)
$A = 36.6mm^2$	(For M8 Bolts)
$\lambda_{m2} = 1.25$	(Table 5.1 EN 1993-1-4:2006)

Shear Resistance Check: (Table 3.4 EN 1993-1-8:2005)

 $F_{v,Ed}$: is the design shear force per bolt for the ultimate limit state.

 $F_{v,Rd}$: is the design shear resistance per bolt.

 $F_{V.Ed} = 0.75 \text{kN}$

 $F_{V,Rd} = \frac{\alpha F_{ub}A}{\lambda m^2} = \frac{0.6 \ x \ 800 \ x \ 36.6}{1.25} \ x \ 10^{-3} = 14.05 \text{kN} \rightarrow F_{V,Rd} = 14.05 \text{kN} > 0.75 \text{kN}$ Okay

Therefore, Use M8 Grade 8.8 Bolts @200mm C/C.

Connection To Timber - Side Fixed – Span of 2000mm: Shear Resistance Check:

Shear Force per screw $= \frac{0.75 \text{kN}}{1.5} = 0.5 \text{kN}$

Shear Capacity of M8 Coach Screws = 1.17kN as per BS 5268-2:2002

Therefore, 1.17kN > 0.5kN Okay

Minimum edge distance required is 5d = 5 x 8 = 40mm.

Therefore, use M8 Coach Screws or similar @200mm C/C.

Connection To Aluminium window frame - Side Fixed – Span of 2000mm:

Shear Resistance Check:

Shear Force per screw = 0.75kN

Shear Capacity of M5.5 Index Screws = $\frac{4.82 \text{kN}}{2}$ = 2.41kN as per Datasheet in Appendix B.

Therefore, 2.41kN > 0.75kN Okay

Therefore, use M5.5 ABR Index Screws or similar @200mm C/C.

Glass Analysis - Bending Stress of Glass Panel due to 2.5kN/m2 Wind Loading:

- Analysis Software was used to determine maximum bending stress of the glass due to 2.5N/m2 Wind Loading.
- 10/10/1.52mm T/L/T Glass analysed, horizontally toughened Laminated.
- Interlayer Properties used for analysis, E= 18MPa, G = 6.82MPa EVA
- Bending Stress analysed based on glass panel of 2000 (I) x 1100 (h) mm.

Result:

Max. Bending Stress = 13.29N/mm² X 1.5 = 19.94N/mm² < 83.3N/mm²

OK in Bending

- A2 stainless steel version (code ABRA2) for use exclusively with aluminium (does not produce corrosion by galvanic coupling). Do not use screw in stainless steel to drill steel, as point will burn out due to lack of hardness.

Technical remarks

The transmission of the anchor loads to the supports of the concrete member shall be shown for the ultimate limit state and the serviceability limit state; for this purpose, the normal verifications shall be carried out under due consideration of the actions introduced by the anchors. For these verifications the additional provisions given in the current design method shall be taken into account.

As a pre-condition the anchor plate is assumed to be flat when subjected to the actions. Therefore, the plate (if present) must be sufficiently stiff. The C-Fix anchor plate design is based on a proof of stresses and does not allow a statement about the stiffness of the plate. The proof of the necessary stiffness is not carried out by C-Fix.

During the design process, the following hints and warnings were issued:

• Filling Washer Required
