

Low-Iron Glass

There is clear glass and then there is Low-Iron Glass. It is produced through a scientific process in which the iron particle agents found in regular (greenish-hue) glass are removed. Low-Iron Glass provides the utmost visual clarity and truest colour representations for showing off your delicate bathroom tile and marble work.

Similar to high definition standards, the difference is most startling when putting a piece of Low-Iron Glass next to a piece of regular green glass. What you will see is that Low-Iron Glass gives that near invisible look and airy feel to any room. It is the crystal clear choice for your glass.

More characteristics of Low-Iron Glass:

- Reduced greenish tint
- Increased light transmission
- Manufactured with reduced iron content
- Colourless appearance
- Exceptional Clarity
- True colours of shower tile can be seen from outside of the shower

Available Edge Work:

- Bevelled Edge
- Pencil Polish Edge
- Flat Polish Edge
- Seamed Edge
