

Guide to splashbacks

Your glass splashback will be precision-cut, custom painted or printed and installed with a flawless finish to make your kitchen or bathroom surpass your expectations.

All our glass is toughened low iron 6mm float glass with polished edges as standard. Low iron glass is a premium glass with less green in it than normal float glass thus giving more vibrant and truer colours.

Digital surveying

This is the most accurate way to take measurements of your splashback area. Precision accuracy at this stage saves time, hassles, and money later on. We charge £170 + VAT for this service. Alternatively, you can supply us with your measurements.

Computer-controlled cutting

We use state of the art CNC machinery, scanners and waterjet cutters to ensure measurements taken and supplied are precision-cut and ensure a flawless edge.

Minimal joins

The fewer joins in your splashback, the more seamless the finish. We can go up to 6,000mm splashbacks if required (made2measure installation only).

Stunning colours

We custom-mix, spray and then heat cure all our splashbacks in-house. This ensure rich and vibrant colours which can be perfectly matched and all our painted glass splashbacks come with a 10-year paint finish warranty.

Generous sample sizes

A glass splashback is a long-term investment so to help make sure you make the best decision we offer a free, 200mm x 200mm, custom sample to give you a clear idea of the colour.

Extras

We offer free Ritec ClearShield easy-clean coating on all installations which makes it almost effortless to wipe away marks with a Teflon like non-stick coating on the glass.

*your choice.
